

Replacing Your HyperHEPA® Filter

I. Opening and Closing the Air Cleaner Housing

The stacked housing elements are held together by two locking arms that hook into the diffuser. To open the system, follow the steps below.

1. Disconnect the IQAir System from the power supply before attempting to open the system.
2. Press the first locking arm outward, using both thumbs as shown. Press just hard enough to release the arm from its snap-in position in the diffuser. Disengage the other arm in the same way.
3. Pull both locking arms evenly outwards until they snap into place and remain open. Access to all filters is now possible (to change the HEPA filter, refer to section II below).
4. To close the housing, simply align the housing modules and push the locking arms inwards simultaneously until they snap back into the diffuser.

Opening

Closing

Troubleshooting when closing the Housing

If the IQAir System does not close properly, the upper part of the system may be offset against the lower part. To solve this problem, simply open both locking arms again, align the housing modules and push both locking arms in simultaneously.

II. Replacing the HyperHEPA® Filter (F3)

III. Resetting the New Filter Menu (Filter Life Reset)

The New Filter Menu allows you to reset the filter life counter for a newly replaced filter. As a result, the appropriate filter life LED on the control panel will be reset to green and the hour count in the Remaining Filter Life Menu will be reset to the full life span of the new filter.

Resetting the filter life monitor will also cancel the “Replace Filter” warning (red light) from the main display window and the Filter Life LED will change from red to green.

1. To reach the Filter Life Reset function from the main display window, press the **Menu** key seven times.
2. Press and hold the **Enter** key until the flashing cursor appears.
3. Press the **Enter** key until the flashing cursor appears.
4. Press the **Enter** key to confirm that the selected filter has been replaced. To safeguard against inadvertently resetting the life of the wrong filter, the selection needs to be reconfirmed. The filter life LED for the appropriate filter is now flashing red.

Note: If the wrong filter has been selected, or if you wish to exit the enter mode, simply press the **Power** key . This leaves the Filter Life Reset unaffected and returns you to the main display.

5. To reconfirm the filter change and exit the Filter Life Reset display window, press the **Enter** key.
6. Upon successful reset of the filter life, the new remaining filter life (taking the currently selected fan speed into account) will be displayed.
